

Web App

This tab provides a list of permissions for the BST11 Web App.

Note: If you have permission to access the Smart Client, you will have permission to access the Web App as well.

Note: The System Administrator will grant the permissions listed below.

Account	Permissions
Domain Service account used to configure and run BST Web micro-apps	This account must be a local administrator on your BST Servers (this account should not be a domain administrator)
System Administrator	Must be a member of the Local Administrator group
Service Account page	Domain account with database rights

Note: After you have accessed the Web App, you will have user responsibility to access the Web Core Package with a supporting privilege.

Account	Permissions
WebCore.Supporting	Web employee profile query (virtual document)
